This hero is built with a flex layout, aligned and justified so that the content will always be centered horizontally and vertically. To change this section's background, select the "Hero Overlay" then scroll to the background section of the Style panel and replace the image. You can also adjust the opacity of the overlay's black background for better contrast.

About

This hero is built with a flex layout, aligned and justified so that the content will always be centered horizontally and vertically. To change this section's background, select the "Hero Overlay" then scroll to the background section of the Style panel and replace the image. You can also adjust the opacity of the overlay's black background for better contrast.

Button text

Main content

The rich text element allows you to create and format headings, paragraphs, blockquotes, images, and video all in one place, instead of having to add and format them individually. Just double-click and start writing.

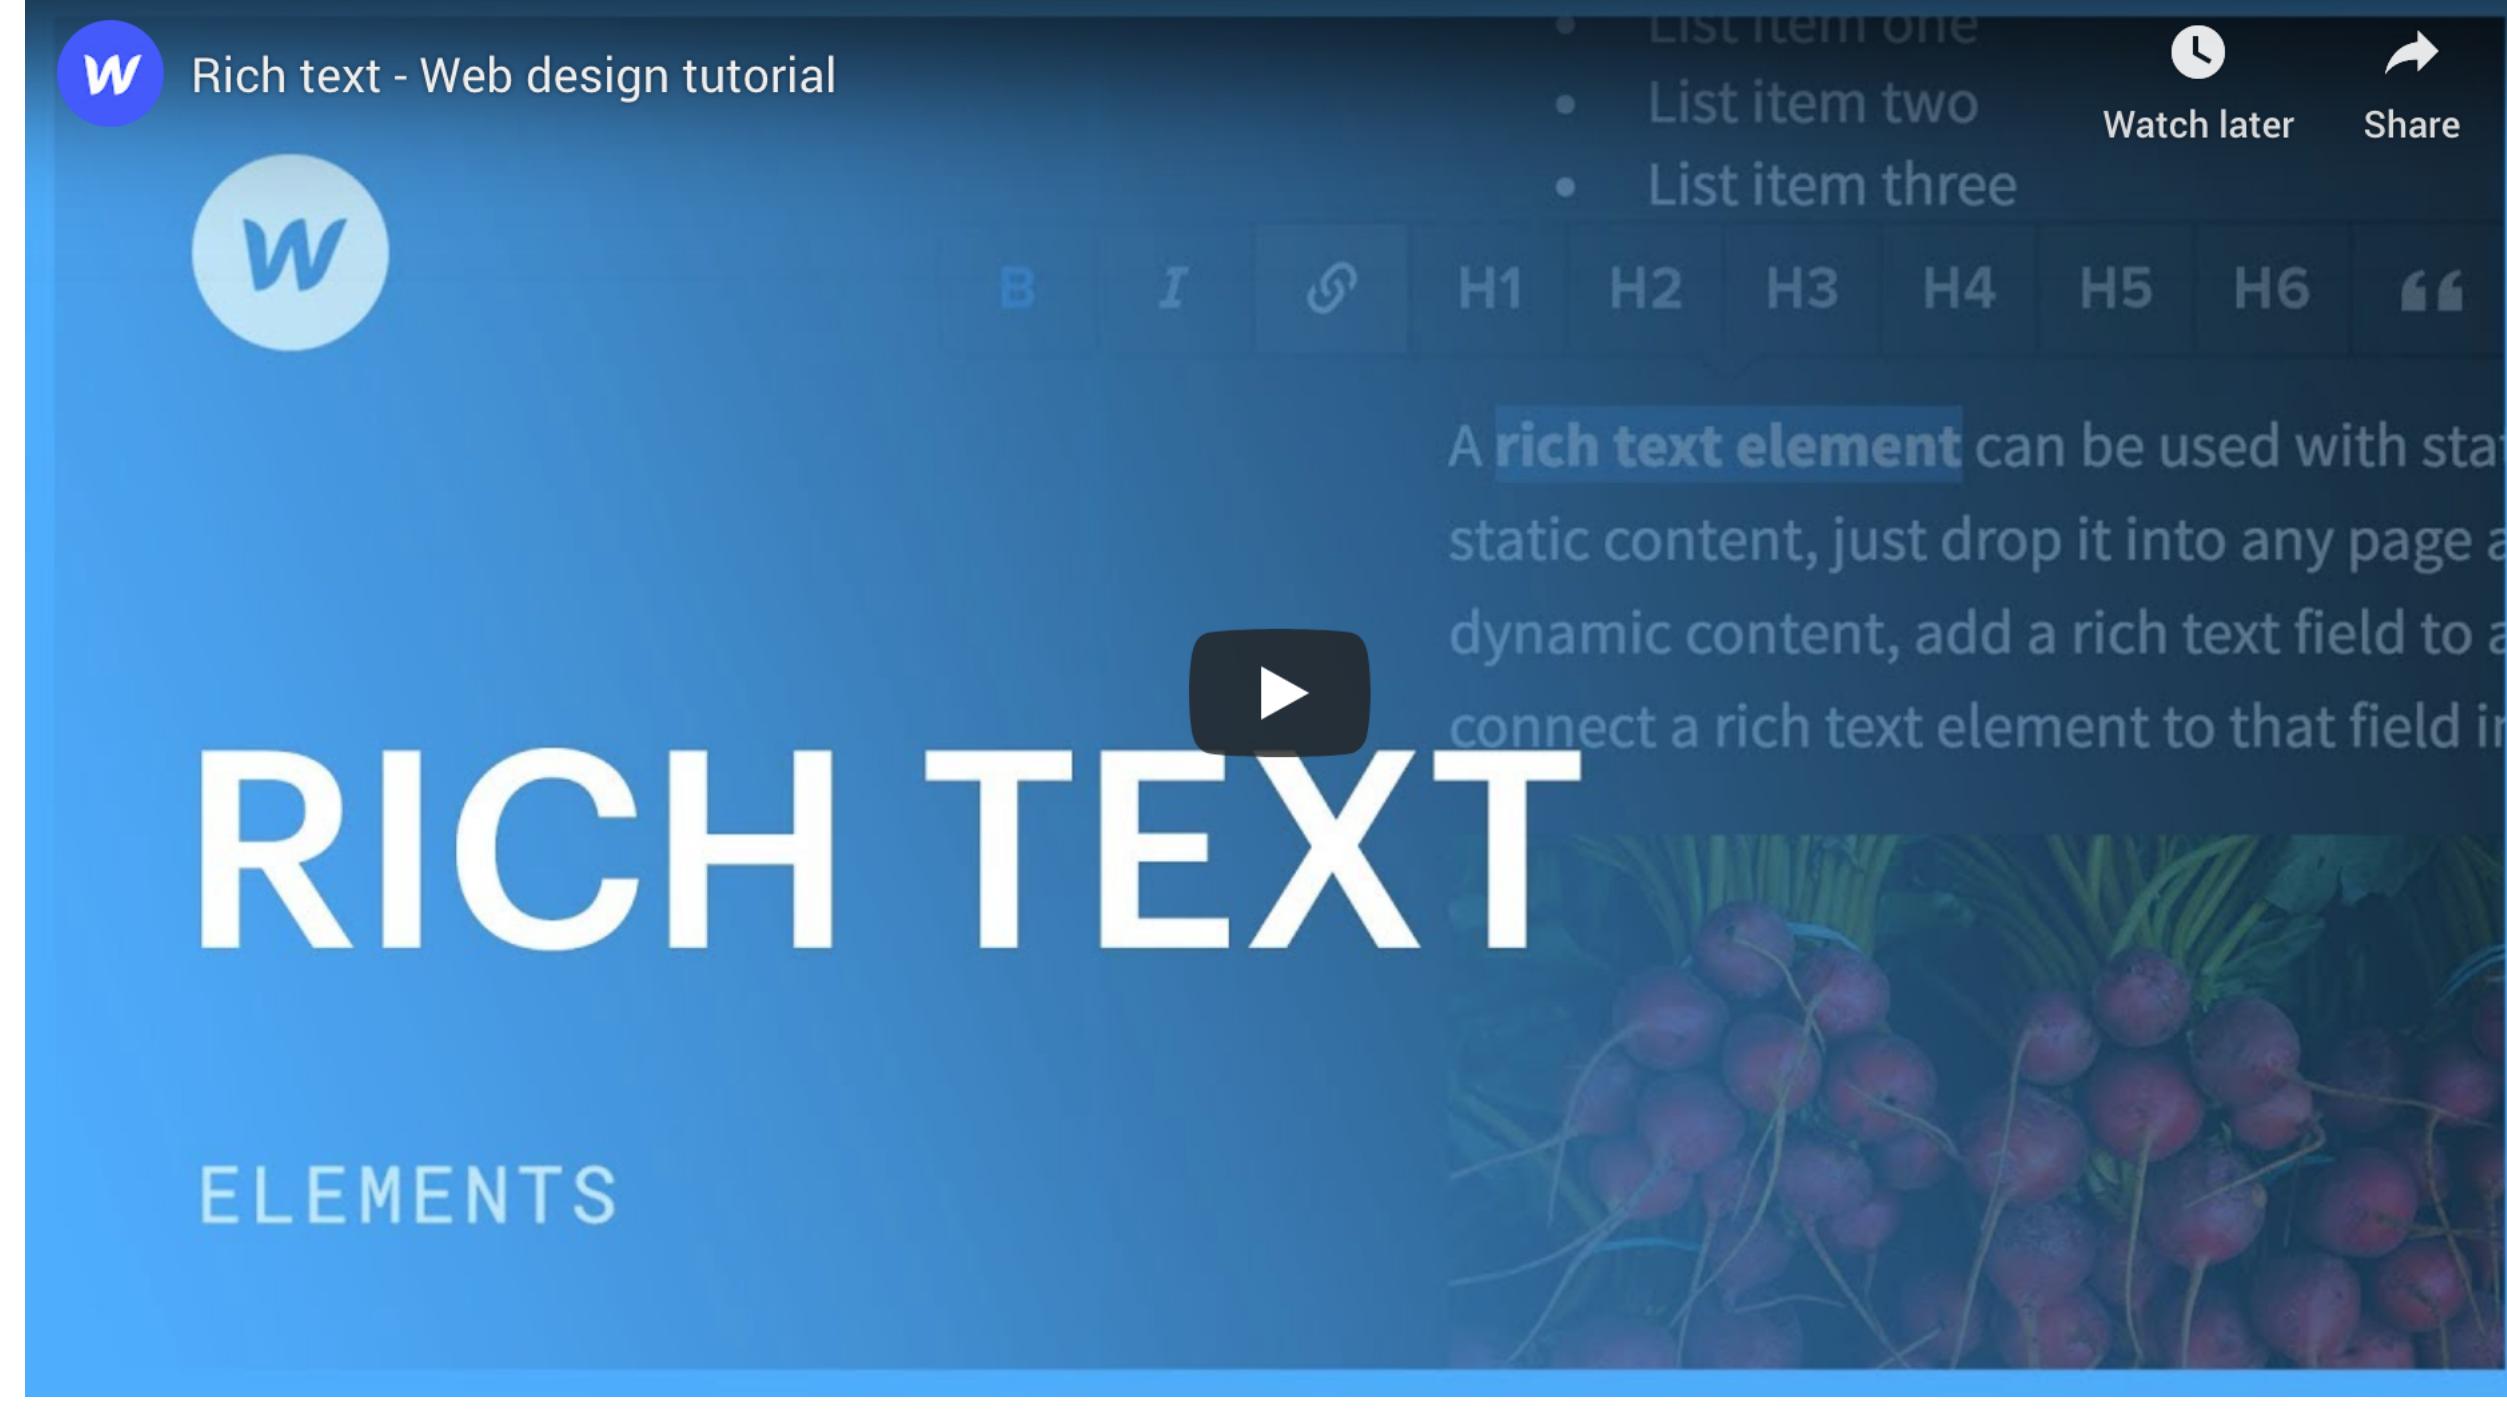

Static and dynamic content editing

A rich text element can be used with static or dynamic content. For static content, just drop the element into any page and begin editing. For dynamic content, add a rich text field to any collection and then connect a rich text element to that field in the settings panel. Voilà!

To style the headings, paragraphs, blockquotes, figures, images, and captions inside your rich text element, first:

1. Give the rich text element a class
2. Select the element within the rich text that you want to style — a blockquote, for example
3. Click the + sign below the selector field to "Nest selector inside of" your rich text element's class

How to customize formatting for each rich text element

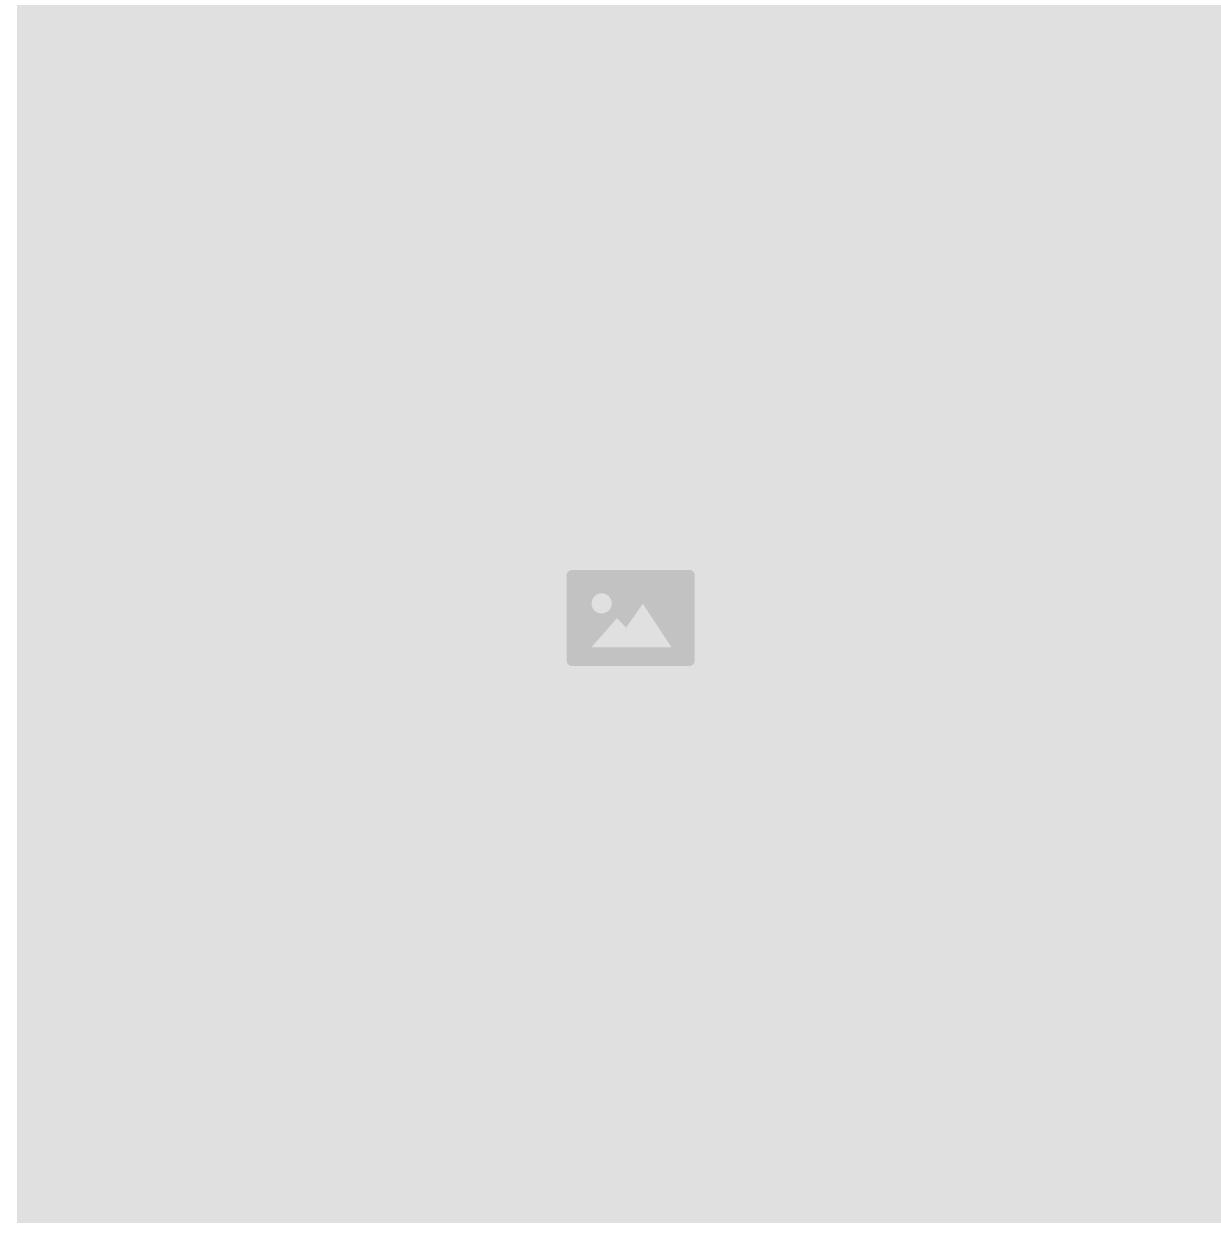

And this would be an H5

- A rich text element can be used with static or dynamic content. For static content, just drop it into any page and begin editing.
- For dynamic content, add a rich text field to any collection and then connect a rich text element to that field in the settings panel.

The rich text element allows you to create and format headings, paragraphs, blockquotes, images, and video all in one place instead of having to add and format them individually. Just double-click and start writing.

Headings, paragraphs, blockquotes, figures, images, and figure captions can all be styled after a class is added to the rich text element using the "When inside of" nested selector system.

Feature section

The feature layout is built with flex, like the hero layout. Don't like our typesetting? You can update every detail in the typography section of the Style panel.

You can also add spacing between the heading and paragraph, swap a video in for the image, or add a button. Just make sure to drop your button into the div block that contains this content.
